Buying Theta Using Coinbase, Simpleswap and Trezor:

Welcome to an Easy Crypto School tutorial on how to purchase **THETA** and or **TFUEL** Tokens. The cryptocurrencies THETA and TFUEL are **altcoins**, so they require a few extra steps in order to buy and **safely store**.

Sense **Coinbase** does <u>not</u> support THETA or TFUEL Tokens, you will start off by purchasing Bitcoin. Then you will send your Bitcoin to a swap platform that sells THETA or TFUEL. Afterwards the swap platform will send your Cryptocurrencies to your THETA Wallet, where it will ultimately be stored.

1. login to your Coinbase account and click **Buy/Sell**.
    1.1. Make sure the **BUY** option is selected and then select **Bitcoin** as the coin you would like to buy.
    1.2. Then insert the dollar amount you would like to purchase.
    1.3. Click **Preview buy** > **Buy now**.

2. Once your Bitcoin appears in your **portfolio**, determine the amount of Bitcoin you would like to swap.
    2.1. Go to the swap platform in which you plan to use.
        2.1.1. **IMPORTANT:** I recommend using the platforms <u>Simple swap, StelthEX, Changeangle or Godex</u> to buy THETA and or TFUEL. If you are more advanced and or more familiar with exchanges, use <u>Kucoin</u> to buy your Theta/Tfuel.

3. Once you are on your preferred **swap platform**, type the amount of **Bitcoin** you would like to swap into the box provided.
    3.1. Select THETA or TFUEL as the coin you would like to swap your Bitcoin for.
    3.2. When you are finished click **start exchange**.

4. In order to complete this transaction, you'll need to enter the THETA or TFUEL **recipient address**.
    4.1. To find this address, plug your hardware wallet into your computer and login to either your Trezor or Ledger device.
    4.2. You will now need to create a new Trezor or Ledger wallet.
        4.2.1. To create a new Ledger/Trezor wallet that can hold THETA and/or TFUEL tokens, Go to [Theta web wallet](#) and simply make a new THETA address by click **Create wallet**.

5. Once you create a new THETA address via Ledger or Trezor, send your THETA or TFUEL tokens there.
    5.1. To access your tokens follow the steps bellow:
        1. Go to [Theta web wallet](#) and clicking "Hardware"
        2. Choose your hardware wallet (Ledger or Trezor)
        3. For Ledger: Make sure the Ethereum app is open on your hardware wallet.
        4. Select your address that you plan to store your THETA and/or TFUEL tokens on, then click "Access My Wallet"
        5. Your wallet has now been unlocked, and you can send/receive THETA/TFUEL tokens on the Theta mainnet blockchain.

6. Now that your THETA Wallet is set up, click **receive > copy your public address**.

6.1.   Go to the swap platform you intend to use and past the address into the recipient address box.

6.2.   Copy your new address and return back to Coinbase.

6.3.   Click Send/Receive and past the new address into the box labeled "to."

6.4.   Make sure to insert the same **BTC amount** you told the **swap platform**.

6.5.   You can then click **continue** and **confirm your purchase**.

7.   Coinbase may ask for a Driver's license and face photo to verify your purchase.

7.1.   To do so, click home > Bitcoin(view assets) > Wallet > select you pending Bitcoin Transaction > Accelerate withdrawal with photo ID.

8.   Once your **photo ID** is verified your Bitcoin will be swamped for THETA or TFUEL. After **15-45 minutes**, your transaction will be completed and your THETA and or TFUEL will be sent to your **THETA Wallet**.
